ASHAM

About **Asham**

Asham Arvin MiddleEast was established with the vision of providing professional solutions to the evolving demands of the woodworking, interior design, and construction industries. Leveraging deep technical expertise, modern industrial infrastructure, and a specialized team, we strive to deliver distinctive services in the production of Melamine-faced MDF, Particleboard (Chipboard), HDF, Impregnated Paper, and Custom Pressing services.

Our target audience includes architects and interior design firms, developers and building contractors, MDF and wood product manufacturers, as well as professional cabinet makers and decorators. We cater to professionals who specialize in bespoke projects—those who demand uncompromising quality, strict adherence to timelines, and flexible, expert suppliers who prioritize sustainability and responsible manufacturing.

Strategically located in Takestan, Qazvin, our facility spans 65,000 square meters. This prime location ensures rapid and cost-effective logistics and distribution across the entire country.

Our group, with the aim of providing world-class products, has equipped its production line with a fully automatic Wemhöner press from Germany. Utilizing this top-tier technology allows us to produce products with perfectly uniform surfaces and exceptional durability by using nickel and chromium-plated plates and enduring very high temperatures.

VITS Technology

Within this facility, the impregnation process of specialized MDF and HDF papers is executed using the state-of-the-art, fully automated VITS line from Germany. This integrated, engineered system meticulously controls every stage—from resin application to final drying. The result is impregnated paper with uniform resin absorption, a stable surface, and premium quality, meeting the demands of both industrial-scale production and high-precision custom projects.

The VITS impregnation line features a superb modular design, intelligent heat distribution, and precise temperature control, optimizing energy consumption while ensuring consistent quality across a daily output of approximately 70,000 square meters. The ability to calibrate process parameters based on paper type, resin formulation, and end-use ensures that the final product adheres to the highest industry standards, ready for top-tier MDF manufacturing .

By leveraging VITS technology alongside technical expertise and continuous quality control, this complex has established itself as a reliable partner for MDF manufacturers, cabinet makers, and interior design professionals. Our focus on product uniformity, process stability, and flexibility in meeting diverse client needs solidifies this production line as a cornerstone of our value chain in the wood industry.

The unique feature of our production line is the stunning speed and precision in the Short Cycle process (13-second cycle), which, in addition to preserving the integrity of the wood texture and veneer, provides high production capacity to meet high-volume orders. Relying on this precise German engineering and the ability to adjust thickness up to 25 mm, we are committed to delivering a product with premium quality standards and elegance in execution to our customers.

For the first time in the industry, this complex - relying on the deep technical knowledge of expert personnel and utilizing advanced impregnation equipment - has succeeded in developing a fully exclusive formula in the production process of impregnated papers; a formula that has significantly increased the flexibility of the final product and completely resolves the issue of paper brittleness. The result of this innovation is impregnated papers that, while maintaining strength, deliver flawless and stable performance during pressing and shaping processes.

This technological achievement is the result of the synergy of human resources' specialized knowledge, precise control of production parameters, and the use of high-quality, up-to-date machinery that allows for the fully engineered adjustment of resin, temperature, and time. High flexibility, structural uniformity, and premium durability of the product have defined a new standard in the quality of impregnated papers and have perceptibly raised the expectations of the market.

At **Asham Arvin Middleeast**, we specialize in the production and pressing of MDF sheets, as well as the supply of premium impregnated papers. Our primary focus is on delivering unparalleled quality and rapid responsiveness. We understand that every decoration and construction project has unique requirements; therefore, we strive to fully tailor our services to meet the specific needs of your projects. Our goal is to provide professional and efficient solutions in this industry.
